INTRODUCTION TO OFFICE AUTOMATION

Office automation refers to the use of computers, software, and other electronic devices to carry out routine office tasks more efficiently and accurately. It helps reduce manual work, saves time, and improves communication and productivity in an organization. Office automation includes various tools and technologies used for data processing, communication, documentation, and storage of information.

Office automation means using computers and software to do office work automatically and efficiently. It helps in creating, storing, and sharing information quickly without much manual effort.

Office automation refers to the integration of office functions such as word processing, data management, communication, and document handling through the use of electronic systems and computer-based technologies. Office automation means using technology such as computers and software to do office work automatically, quickly, and accurately instead of doing it manually.

Office automation is a broadly used term and it represents a new profession, a new integration of technologies and a new perception of the potential of information tools available to man. It is primarily based on two factors: computers and communication technology. The computer is moving from being an independent system to a component embedded in a whole range of office devices. Communication technology integrates these devices and people. It provides an effective communications infrastructure.

Goals of Office Automation

The goals of office automation may be expressed in terms of

- Greater efficiency,
- Better service,
- Better accuracy,
- Demanding for timeliness,
- Facility in control,
- Standardization of office routine,
- Relieves of monotony,
- Prevention of fraud,
- Better information retrieval,

- Lower operating cost,
- Reduction in paper work,
- Improved communication environment.

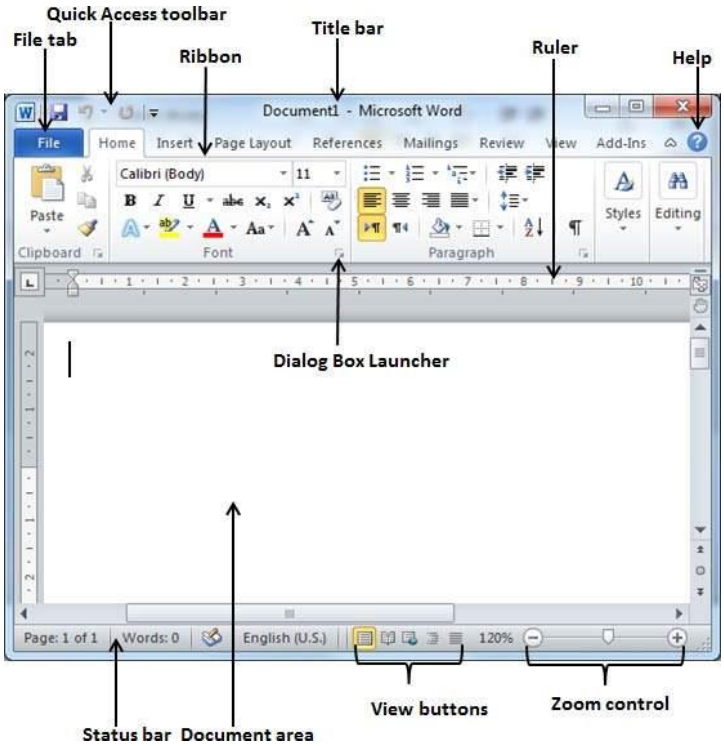
WORD PROCESSOR

Word processor is an application software that helps us to type, edit, layout and do associated activities. Microsoft Office Word allows you to create and edit personal and business documents, such as letters, reports, invoices, emails and books. By default, documents saved in Word are saved with the .docx extension. Microsoft Word can be used for the following purposes :

- To create business documents having various graphics including pictures, charts, and diagrams.
- To store and reuse readymade content and formatted elements such as cover pages and sidebars.
- To create letters and letterheads for personal and business purpose.
- To design different documents such as resumes or invitation cards etc.
- To create a range of correspondence from a simple office memo to legal copies and reference documents.

Working with Documents

Following is the basic window, the various important parts of this window.



Steps to start the Word application

Water mark: Water marks are text or picture that appears behind the document text. They often intersect or identify the document status, such as making documents a draft. Water marks are intended for printed document.

To add watermark to the document, just click on the page layout tab and click on the watermark. Select the format from drop down list or we can define our own styles or use pictures as watermark.

MAILINGS TAB

Almost everyone can save time with personalized form letter. We need two things to create a personalized letter. We need two things to create personalized mailings with a mail merge. A

letter which is called main document and contains the information that does not change. The other is merge field that acts as placeholder for the valuable information. This information most likely is a list of names and addresses which is called data source and contain the information that does not change for a letter. When we merge to the result into individualized letter called merge document.

Main document:

Type the letter to the document, in the mailings tab click on mail merge.

Select the letter to the type of the document:

- Click on next
- Click on current document
- Click next

Creating data source

Next stage of the mail merge is creating data source and then entering the name and address that will be merged into our letter.

• Select Type new list from mail merge dialogue box.

• Create dialogue box will appear and it contains list of fields.

• Click on customize button to create the field as we like.

• Click on delete to delete already existing field. Or click deletes all.

• We can add our own field name with the use of add button in the list box.

• Click ok. When the list contains the fields for all information that we want include in our letter. The save as dialogue box will appear.

• Type the name for the word file that contain data source that we are creating click on save button.

Entering data

After we have determined the fields in the data source we can enter the individual data records in the form that Word has designed for us.

• Click on edit recipient list to edit.

• Click on next.

MERGING THE LETTER

We have to know to create a main document and a data source. The next step is to enter the merge field into our form letter.

• Click in the document where we want to insert the merge field, click on insert merge field from the mailings tab.

• Click on the first field that we want to insert. The field name will insert into our document.

• Repeat the above steps to add second field.

• Press enter key to move to the next line.

• Continue insert merge field.

PERFORMING MERGE:

• Click on edit individual letter. Then a box appears.

• Enter the range in from and to text boxes to merge only some of your records.

• Click on all to merge all records. Then click ok. The merged letter will appear on the screen.

REVIEW TAB

Proofing

Spelling and grammar: Word will automatically check for spelling and grammar mistakes. As we type unless we turn this feature off. Spelling errors are noted in the document with a red underline. Grammar errors are indicated by a green underline. To use spelling and grammar checker, follow these steps:

• Select spelling and grammar from review tab.

• The spelling and grammar dialogue box notify the first mistakes in the document and misspelled word will highlight in red.

• If the word spelled correctly, click the ignore button or click ignore all button if the word appears more than once in a document.

• If the word spelled incorrectly, choose one of the suggested spelling in the suggestion box and click the change button or change all button to correct all occurrences of the word in the document. If the correct spelling is not suggested, enter the correct spelling in the not in dictionary box and click change button.

• If the word spelled correctly and will appear in many document we type, click the add button to add the word to dictionary so it will no longer appear as a misspelled word.

• If Words find a grammar mistakes, it will show in the dialogue box as the spelling error. The mistake is highlighted in green text. Several suggestions may be given in the suggestion box. Select the correction that best applies and click change.

• If no correction is needed, click on ignore button.

Research: Open the research pane through reference material, such as dictionaries, encyclopaedia, and other translation services.

Thesaurus: To use thesaurus, select Thesaurus from review tab, a task pane will appear, then type the word in the search for textbox and click on search button. The meaning of the word we enter on that box will appear on the plane.

Protect

Protect document: Protect document restrict how people can access the document. It prevent our document from unauthorized access to protect our document do following.

- On the review tab, click on protect document
- Click restricts formatting and editing option from the drop down list
- A task pane will appear, click on formatting restriction check box
- Then click on editing restriction check box
- Click on yes start enforcing protection
- Then a dialogue box will appear, enter the password in the text box. Re enters the password, and click ok.

When a document is protected we can cancel the protection by click on protect document, then click stop protection

View Tab

DOCUMENT VIEWS

Print Layout view: Switches to print, layout view or page break view. Which is an editing view that displays documents as it will print?

Web Layout: Switches to web layout view on order to web page.

Full Screen Reading: To read a document with minimum of eyes stain we can use reading layout.

Outline View: A view that shows the heading of a document indented to represents there level in the document structure.

Show/Hide

Ruler: Display or hide ruler which we can use the position object, change page margins etc...

Document Map: A vertical page on the left edge of the document window that displays an outline of the document heading. We can use the document map to quickly move through a document and to keep track of our location in which.

Thumbnails: Thumbnails are small render in of each page in our document displayed in a separate page. Thumbnails give us a visual impression of the contents of each page.

Macros: If we want to perform task repeatedly in MS Word, we can automate the task by using macro. A macro is a series of word commands and instruction that we can group together as a single command to accomplish a task automatically. Macros are used for following purpose

- To speed up routine editing and formatting
- To combine multiple commands: for example, inserting a table with a specific size and border, and with a specific number of rows and columns.
- To automate complex series of task.

Create macro: We can create macro by using a macro recorder to record the sequence of action.

- On the view tab, click on macro and then click on record macro.
- In the macro name box type a new name for the macro.
- Click the template or document in which you want to store the macro.
- Click on stop recording.
  Play back the recording we have just made
- Open any blank document or open the document we want to place the macro
- On the view tab, click on macro
- Click on view macro
- Then select the macro name from the dialogue box.
- Then click OK
