# CHAPTER 4

# POWER POINT

**Introduction**

PowerPoint is the powerful and ubiquitous presentation program from Microsoft Corporation. It is a collection of slides that helps to create effective presentations very quickly. It gives you the facility to create fabulous presentations that incorporate video, audio, pictures and PowerPoint animations.

You can create your own PowerPoint presentation on slides. You can use layouts to organize the content on each slide. You can add themes and backgrounds to your slides. After you complete your slides, you can run your presentation. The slides can also be viewed directly on your computer monitor or on a screen using a projector connected to your computer. Thus a PowerPoint shares common look and feel with other office components such as MS Word, MS Excel etc.

this chapter you learn how to create a PowerPoint presentation in an effective manner. Some examples of presentation softwares are King soft Presentation, Libre Office Impress, OpenOffice.org Impress, Slide Rocket, Microsoft PowerPoint. Here we introduced about Microsoft PowerPoint Presentation.

Microsoft PowerPoint is a graphic presentation program introduced by Microsoft Corporation. The slides contain text, graph, organizational charts, music, video and other objects. The slides are placed in presentation file so that you can use to print transparencies for an overhead projector. This presentation program is supposed to help both the speaker with an easier access to his ideas and the participants with visual information which complements the talk.

## Starting PowerPoint

To start PowerPoint different methods can be used.

- If we have a PowerPoint shortcut on the desktop, then double click on it.
- Otherwise, click on the Start button in the task bar.
- ➢ From the Start menu select Programs option.
- ➢ Then click on the Microsoft PowerPoint option.

## PowerPoint Window

A power point window has the basic components.

**Title Bar:** It shows the name of the presentation currently active preceded by Microsoft PowerPoint. The right corner of this bar contains Minimize button, Maximize/Restore button and close button.

**Menu Bar:** It provides access to the commands on the menu. It contains options like File, Edit, View, …… and is generally positioned just below the title bar. When you click on a menu item, it will show a drop down menu with a list of sub options. The extreme left of the menu bar holds the control menu icon.

**Standard and Formatting Tool Bars:** It provides access to various sorts of commands and thereby help user to perform tasks faster and easier. Standard tool bar provide shortcuts for menu commands, whereas formatting toolbar is used for text formatting. By default these tool bars are placed just below menu bar.

**Status bar:** The bottom of the PowerPoint screen provides the status bar, which provides information about the current slide number, number of slides in the presentation, the presentation template in use and spelling and grammar status button.

**Scroll bars:** PowerPoint screen provides two scroll bars such as vertical scroll bar and horizontal scroll bar. These are used to move the slide vertically or horizontally along the screen.

**View buttons:** Left of the horizontal scroll bar contains five view buttons such as Slide View, Outline View, Slide Sorter View, Notes Page View and Slide Show.

**Drawing tools:** It is located just below the menu bar and is used to create and manipulate text and shapes.

**Slide area:** The working area for creating and editing slides is the slide area.

**Placeholders:** These are the objects on the slide that can hold text, chart, tables, clipart etc. Placeholders indicate what is to be typed in a given area on the slide.

## Creating a Presentation

A presentation may have more than one slide. To create the first slide does as follows:

i. From Home menu select New command to display the New Presentation display new presentation slide.
ii. From that select Blank Presentation icon and click Create button. Then select New Slide button on the standard tool bar. Now PowerPoint displays a dialog box with different slide formats.
iii. Select any one slide to insert the selection into the presentation.
iv. Now enter data into the placeholders.
v. Then click outside the work area or press Esc key twice to deselect the placeholder.
vi. To add second slide into the presentation click the New Slide button on the standard tool bar. Now PowerPoint displays the same New Slide dialog box.
vii. Select any one slide to insert the selected slide into the presentation.
viii. As in the first slide enter your desired data into the presentation and press outside the work area to deselect the placeholders.
ix. If you want to include more slides repeat steps vi to viii for each slide.

## Saving a Presentation

The created presentation can be saved for future applications. The steps are:

i. Select Save As option from Home menu or click on the save icon in the tool bar to display Save As dialog box.
ii. Type the name of the file in the Filename box of Save As dialog box.
iii. Also select the appropriate drive and folder to save the file.
iv. Then Click on the Save button.

## Opening a Presentation

To open already saved presentations do as follows:

i. From Home menu, select Open option to display the Open dialog box.

ii. Select the required file or type the filename into the Filename box.

iii. Then click on the OK button.

## Closing a Presentation

To close a presentation, choose Close option from Home menu or click on the Close button on the title bar.

## Templates

Templates determine the presentation's colour, fonts, and other design features. It can be used to create a professional looking presentation very quickly. To use templates do as follows:

i. Start Microsoft PowerPoint.

ii. From the opening screen choose Design option which shows different templates. Select any one template.

iii. Now a new slide will be inserted with the selected Template background. Thus the use of template is to provide a predefined background and text format. After creating the first slide click on New Slide icon on the tool bar to open the New Slide dialog box. Select any one format from them. This inserts a new slide with the same background. In order to change the background do as follows:

- Right click on the Template and select Apply to All Slides option to design the templates same for all slides or select Apply to Selected Slides to design the template for only the selected slides, or select Set as Default Theme to design the template as a default format.

v. After creating your presentation you can save, view or print the presentation as you have done for blank presentation.

## Deleting a Slide

To delete a slide, right click on the Normal slide from View menu and select the Delete Slide option.

## Copying a Slide

To copy a slide, right click on the Normal slide from View menu and select the Duplicate Slide option.

## Editing Slides

### ❖ Add Text

i. To add texts into an existing slide do as follows:

ii. Display the slide to be edited.

iii. Click on the text placeholder or already entered text to select the placeholder.

iv. Place the cursor at the required point in the text placeholder.

vi. Enter data through the keyboard.

If you want to place the text outside the default placeholders, do as follows:

i. Select text box from the Drawing tool bar.

ii. Insert it at the location where you want to show the text.

iii. Enter your text into this text box through the keyboard.

### ❖ Moving and Copying Text

The steps to move the text are:

i. Select the text you want to move.
ii. Click on the Cut button from the Home menu.
iii. Place the cursor at the point where you want to insert the text.
iv. Select the Paste option from the Home menu or select the Paste option by right-clicking in the placeholder or press Ctrl + V keys or Shift + Insert keys simultaneously.

The steps to copy are:

i. Select the text.
ii. Click on the Copy option from the Home menu.
iii. Place the cursor at the point where you want to insert the copies text.
iv. Select the Paste option from the Home menu or select the Paste option by right-clicking in the placeholder or press Ctrl + V keys or Shift + Insert keys simultaneously.

## ❖ Checking Spelling

To check spelling:

i. Open the presentation and spelling option from the Review menu to display Spelling dialog box.
ii. Select appropriate changes if necessary.
iii. Finally click on the Close button to close Spelling dialog box.

## Formatting Text

## Changing font size and style

To change font size first select the text using mouse. Then select the required size from the font size list box. PowerPoint also provides two font size buttons such as Decrease font size button and Increase font size button.

Each click on Decrease font size button reduces the size of the text to the next size smaller in the font size list box. Similarly each click on the Increase font size button increases the size of the text to the next size larger in the font size list box.

Font size and style can also be changed with Font dialog box. The different steps are:

i. Select the text and choose Font option from the Home menu to display Font dialog box.
ii. Select the required font from the Font list box.
iii. Then select the font style and size from respective list boxes.
iv. Make the appropriate selection in the Effects area. The different options provided on Effects area are:

♦ Strikethrough

♦ Double Strikethrough

♦ Superscript

♦ Subscript

♦ Small Caps

♦ All Caps

♦ Equalize Character Height

v. Select the desired format and clock on OK button to accept the changes.

## Changing the Characteristics of Bullets

The different steps to change the bullet characteristics are:

i. Select the text and choose the Paragraph option from the Home menu.

ii. Then select the bullet type, size and colour.

iii. Click on OK to accept the changes.

## Changing Indent

You can change the indent (starting point) of the first line, succeeding lines or both. The different steps are:

i. Display the slide

ii. Select the bulleted items.

iii. Now indent markers appear on the Ruler bar. The triangular markers at the top of the bar represent the position of the bullets whereas those on bottom represent where the text after the bullet symbol and succeeding lines of text for each bullet starts.

iv. Drag the triangular markers to change the bullet position as well as the text position.

v. If you want to change the indent of both bullet and text simultaneously, drag the small rectangular box marker.

## Rearranging Slides

In order to change the order of the slides do the following:

- In the pane that contain the Outline and Slides tabs, click the Slides tab.
- Select the slide thumbnails that you want to move, and then drag their new location.

## Viewing a Presentation

There are four different view modes are possible for the created slide. They are:

♦ Slide View

♦ Outline View

♦ Slide Sorter View and

♦ Slide Show

## Slide View

It is the default view for a presentation. In this mode you can view one slide at a time.

This view mode is suitable for creating and editing a presentation.

## Outline View

It displays the slides in outline format without background, colours, text style etc. It displays only the slide title and bulleted text. This mode displays the contents of several slides simultaneously. To make out line view, either click on the Outline View button in the top left of the screen below the tool bar. With this view it is easier to rearrange or delete slides.

## Slide Sorter View

It displays all the slides simultaneously. Thus it is easier to rearrange, delete or copyslides. To switch to slide sorter view either click on the Slide Sorter option from theView menu or click on the Slide Sorter button in the lower right of the screen.

## Slide Show

It displays the slide one after another in the order it was arranged. In this case theshow begins with the currently displayed slide. To switch to this mode either click onthe Slide Show button in the lower right of the screen or select Slide Show from Viewmenu or click on the Slide Show menu or click on F5 button in the keyboard.

## Custom Animation and Slide Transition

Use a basic custom show to give separate presentation to different group in your organization.

i. On the slide show menu, in the start slide show group, click the arrow next to the

Custom Slide Show, and then click the Custom Shows.

ii. In the custom show dialog box click on New button.

iii. Under slides in presentation, click the slides that you want to include in the custom

show, and then click Add. To select multiple sequential slides, click the first slide and

hold down shift while you click the last slide that you want.

iv. To change the order in which the slide appear, under slides in custom show, click a slide, and then click one of arrow to move the slide up or down in the list.

v. Type a name in the slide show name box, and then click OK. To create additional custom shows with any slides in your presentation, repeat step i through v.

vi. To preview a custom show, click the name of the show in the custom shows dialogue box, and then click Show.

## To Add Transitions

i. Select the desired area of the slide you want to animation. Then select Custom Animation from the Animation menu.

ii. To set the slide transition speed, in the transition to this slide group, click the arrow next to Transition Speed, and the select the speed that you want.

iii. To set the slide transition Sound, in the transition to this slide group, click the arrow next to Transition Sound, and the select the sound that you want.

iv. You can change or remove slide transition from some or all of the slides in your presentation.

v. Then add the effects of transition by clicking Add Effect button in the Custom Animation tab. To see more transition effects on the quick style list, click the More Effects option.

vi. Then click Apply To All option in the Custom Animation tab to put the same transition effect for all slides.

## To remove Transitions

Remove all of the slide transition from your presentation, do as follows:

i. Select the desired area of the slide you want to remove the transition.

ii. From the Animation menu, click on the No Animation option.

## To add Video/Audio

To add videos to your presentation do as follows:

i. Select Movie From File option from the Insert menu.

ii. Then insert your desired movie into your presentation.

To add audio to your presentation do as follows:

i. Select Sound From File option from the Insert menu.

ii. Then insert your desired audio into your presentation.

## To insert and delete Clip Arts

To insert ClipArt do as follows:

i. If your slide has a clipart placeholder double click on it else from Insert menu point to pictures and select ClipArt command to display Microsoft ClipArt dialog box.

ii. From the dialog box, select any one clipart and click on Go button. This places the selected picture automatically into the presentations at the clipart placeholder or at the center of the slide in the case of slides without clipart placeholder.

To delete a ClipArt do as follows:

i. Select the image.

ii. Press Delete key or select the image and choose Cut option from the Home menu.

## Converting a Clip Art image into PowerPoint

To convert an inserted clipart image into PowerPoint object do as follows:

i. Display the slide and click the inserted image.

ii. Right click on the image and click on the Group option and select Ungroup option command.

iii. Now a message prompting – do u wish to convert the object to a Microsoft

drawing – appears with Yes and No buttons.

iv. Click on Yes button. Now the image splits into several parts.

v. Then again Right click on the image and click on the Group option and select the

Regroup command to regroup image into a single image. Now the image has

converted into a PowerPoint drawing.

## Using Masters

The different masters created by PowerPoint. They are Slide master, Hand out

master and Notes master.

## Slide Master

The slide master is an element of the design template that stores information about the template, including font styles, placeholder and positions, background design, and colour schemes. The slide master's purpose is to let you make a global change such as replacing the font style and have that change reflected on all the slides in your presentation.

To view slide master, do the following steps.

i. Select the Master option from the View menu.

ii. Select the Slide Master option from the submenu.

## Hand out Master

Presentation hand outs displays miniature slides of your presentation on letter sized paper, which enables the audience to listen to the presentation without having to take notes on every word. You can print two, three or six slides per paper. The different steps are:

i. Switch to outline view.

ii. Press and hold SHIFT key and point the mouse pointer on the Outline View button.

iii. When screens tip 'View Hand out Master' displays, click on the Outline View button to display a Hand out Master with Hand out Master tool bar or select Hand out Master option from the View menu.

iv. From the tool bar select 2, 3, or 6 page layout. This layout also has the placeholders for header, footer, page number and date.

v. If you want to print this hand out, select Print command from Home menu to display Print dialog box.

vi. Select Hand outs from Print what text box and select Frames checks box.

vii.Click on OK button to start printing.

## Notes Master

It controls the formatting of notes pages. Each note page contains a reduced version of the slide at the top and space in the lower half to add notes. The steps to display Notes Master are:

i. From View menu select Master option.
ii. From the sub menu select Notes Master option.

## Printing a Slide

You can print either a single slide or entire presentation. The different steps to print a single slide are:

i. Display the slide to be printed.

ii. Select Print option from the Home menu to display Print dialog box.

iii. Click on Current slide option or click on the Slides radio button and type the slide number inside the Slide text box.

iv. Click OK button.

## How to copy the files to CD

For copying to CD, a CD writing software is needed. For this commonly used software is Nero.

For copying the files into CD, do the followings.

First click on nero icon → Select the type CD or DVD. Different options are available. From that select the option Data → Make Data CD → Click on Add option ( Select the files we want to copy) → Click on Next button → Burn (Starts copying the data from your pc to CD) → Finish.

## How to copy the files to pen drive

For copying the files to pen drive

- First right click the file → copy then paste into the pen drive

  Or
- Right click the file and click the option send to then select the pen drive name

## Notepad

Notepad is commonly used text editor. It handles only pure text, no format tags or styles. Notepad files are saved with the extension .txt. They are useful for preparing pure text documents and many times used to write programs for computers.

## Wordpad

Wordpad is a basic word processor. It is more advanced than notepad and simpler than Microsoft Word. Wordpad can format and print text. Wordpad files are saved with the extension .RTF (Rich Text Format)

## Paint

Paint is a software used for drawing pictures or editing images. Files are saved as .BMP, JPEG, .GIF, etc
